THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

8. Examiner's Statement of Reasons for Allowance

9. Other _____.

The following is an examiner's statement of reasons for indicating allowance of claim 21: The prior art by McKean et al., [Patent No. 6,009,615] discloses an electromagnetic operating mechanism including a magnet yoke [Fig. 1, 12], a permanent magnet [Fig. 1; 30], an armature [Fig. 1; 40], and electromagnetic coil device [Fig. 1; 60, 61]. However, McKean does not disclose that the method comprising the steps: A) upon application of the control voltage, resetting and initializing the control circuit and starting a charging of the charge storage device; B) subsequently sequentially briefly energizing an auxiliary tripping coil and a main tripping coil, and, if no current flow occurs through at least one of the auxiliary and main tripping coils, permanently disconnecting the control voltage; C) if a current flow occurs through each of the tripping coils, energizing a closing coil so as to move the armature to an attracted position, and subsequently de-energizing the closing coil; D) subsequently sequentially briefly energizing the auxiliary tripping coil and the main tripping coil without affecting the armature, and if no current flow occurs through the auxiliary tripping coil, discharging the charge storage device through the main tripping coil so as to move the armature to a dropped-out position, if no current flow occurs through the main tripping coil, energizing the auxiliary tripping coil so as to move the armature to the dropped-out position, and then permanently disconnecting the control voltage; E) if a current flow occurs through each of the tripping coils, re-starting step D; and F) upon removal of the control voltage, discharging the charge storage device through the main tripping coil so as to move the armature to the dropped-out position. This feature in combination with

the rest of the claim limitations is not anticipated or rendered obvious by the prior art of record.

The following is an examiner's statement of reasons for indicating allowance of claim 33: The prior art by McKean et al. [Patent No. 6,009,615] disclose a circuit arrangement including a magnet yoke [Fig. 1, 12], at least one permanent magnet [Fig. 1, 30] disposed at a side of the magnet yoke, an armature [Fig. 1, 40], and an electromagnetic coil device [Fig. 1, 60, 61] surrounding the magnet yoke. However, McKean does not disclose a control circuit configured to be supplied with a rectified control voltage applied to its input and including a microcontroller, the control circuit including: a trippable permanent interrupting element configured to permanently disconnect the control voltage, the Control voltage being supplied via feed terminals; an auxiliary disabling branch connected to the feed terminals and including a series connection of an auxiliary tripping coil, an auxiliary disabling element, and a current-sensing device; an enabling branch connected downstream of the permanent interrupting element and , including a series connection of a closing coil and an enabling element; a main disabling branch connected downstream of the permanent interrupting element and including a series connection of a forward-biased decoupling diode, a main tripping coil and a main disabling element, the charge storage device being connected in parallel with the main tripping coil and the main disabling element; and a voltage-sensing device connected in parallel with the charge storage device; wherein: a plurality of first connections connect an input side of the microcontroller to the current-sensing device, the voltage-sensing device, and to a control voltage controller an input side of

the control voltage controller being connected to the feed terminals; a plurality of second connections connect an output side of the microcontroller to the auxiliary disabling element, the enabling element and the main disabling element and to the permanent interrupting element; the microcontroller is programmed so as to: be initialized upon application of the control voltage; be briefly close the auxiliary and main disabling elements in a predeterminable order without affecting the armature; activate the enabling element in a pulse-controlled manner so as to move the armature to an attracted position; subsequently deactivate the enabling element; when the control voltage is removed, close the main disabling element so as to move the armature to a dropped-out position; if a respective output signal of the current-sensing device or of the voltage-sensing device fails to appear, immediately close at least one of the main and auxiliary disabling element so as to move the armature to the dropped-out position, and subsequently trip the permanent interrupting element. This feature in combination with the rest of the claim limitations is not anticipated or rendered obvious by the prior art of record.
